KUĆA ZA ČUVARA PLAŽE

HOUSE FOR A BEACH GUARD

Arhitektonski fakultet
Univerzitet u Beogradu

Faculty of Architecture
University of Belgrade

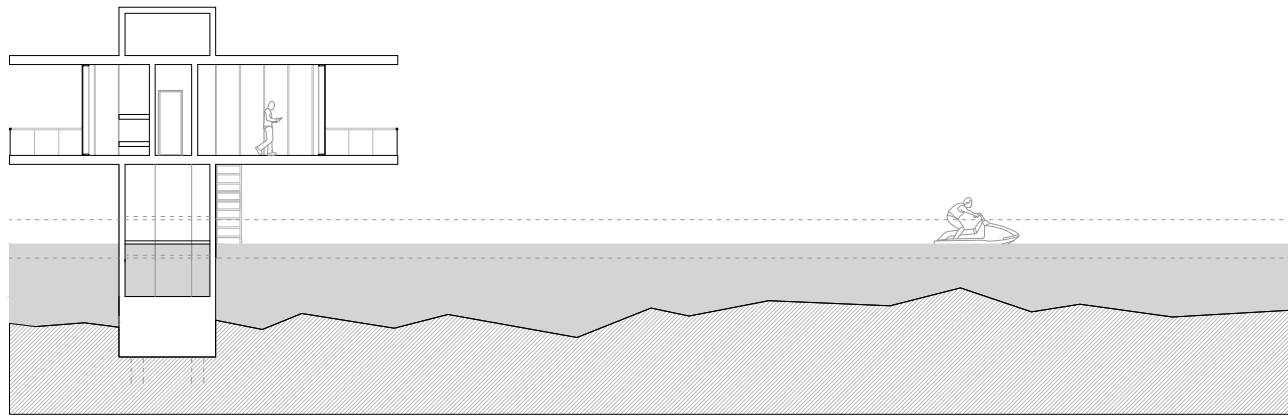

osnova sprata
first floor

↑ Kuća je projektovana sa idejom da omogući što efikasniji rad čuvara. Da bi se omogućilo lako pristupanje objektu i potrebnoj opremi za spasavanje, bez obzira na nivo vode, dok napravljen od plutajućeg materijala čime je omogućeno njegovo vertikalno pomeranje koje prati plimu i oseku. Prostor za boravak je organizovan oko sanitarnog jezgra, čime je omogućena maksimalna vizuelna komunikacija sa okolinom.

↑ The house was designed with the idea to provide the most efficient work of the beach guards. To allow easy access to the house and to the necessary rescue equipment, regardless of the level of the water, the pier was made of floating material which allows its vertical displacement that follows the tides. Living space is organized around a sanitary core, enabling maximum visual communication with the environment.
