

CRATER LAKE

Kike, Japan

Top: 1000m
Diameter: 4 x 1000m
Depth: 100m
Volume: 1000m³
Age: 1000 years
Depth of Crater: 100m
Diameter of Crater: 4 x 1000m
Volume of Crater: 1000m³

Figure 1

Figure 2

Crater Lake is an example of a volcano which has been formed through the process of the erosion of the volcanic cone. The formation of Crater Lake is explained by the process of the erosion of the volcanic cone. The main reason for the formation of Crater Lake is the erosion of the volcanic cone. The main reason for the formation of Crater Lake is the erosion of the volcanic cone. The main reason for the formation of Crater Lake is the erosion of the volcanic cone.
