AMBIJENT AKSONOMETRIJA

The unit consists out of four areas
 - the first one being the kitchen separated form
 - the Second one (the reading area) by a bar
 - the third one is the bathroom and
 - the fourth one is the bedroom
 You could say that one more area exists and
 that one is
 - the area outside of the house, the forest with
 the table setting

This unit is composed for time-to-time habitation for two subjects.
 The unit is placed on a high cliff, the forest helps it ignore the mounting
 around it. Surrounded by two things, breath-taking view on one side
 and forest on the other, the house tends to take the best of it. So, the house has
 small number of walls. Other facade are huge vertical venetians, which allow
 the users to use as much of the surrounding as they wish.
 Also the unit takes advantage of its high and the floor in the reading area is
 made out of glass which makes the user seem like he is floating above the ground.
