Projekat jedinica za dve osobe namenjen je dvojici naučnika, istraživača koji se bave astronomijom i paleontologijom. I pored toga što su istraživači, njihova interesovanja i područja delatnosti su potpuno suprotna, što se ogleda i u projektu. Naime, sama forma proizašla je iz ideje da je paleontolog gotovo stalno orijentisan ka zemlji, a astronom ka nebu. Organizacija korisnog prostora i jednog i drugog korisnika vođena je mapiranjem koje je u slučaju paleontologa vezano za sam 'predmet' iskopavanja - dinosaurusa, a u slučaju astronoma vezano za određeno sazvežđe - Orion. Jedina jedinica koja predstavlja sintezu obe forme jeste mesto u kome se susreću dvojica korisnika i gde provode zajedničko vreme.

Two unit house is designed for scientists, researchers in the fields of astronomy and paleontology. Besides the fact that they are both scientists, their interests and field of work are completely opposite - which is reflected in the project as well. The form itself is derived from the idea that the paleontologist is almost constantly oriented to the earth, and an astronomer at the sky. Organization of both spaces is a sort of mapping which, in the case of the paleontologist, is about the very 'object' of excavation - dinosaur, and in the case of the astronomer is the specific constellation - Orion. Only unit where the two meet is the synthesis of the two forms.
